Contents

1 Introduction

1.1 Purpose of this document

This document servers as an overview for the use cases for Project C

1.2 Scope

The Scope of the project is to offer users a webshop to browse, search and order products. Users of the website can also register and sign up for an account on the webshop. User that are signed in can view their order history and see the status of their orders. Having a registered account is required to place an order.

In the system there are also admin accounts. These admin accounts can create, edit and delete users and products.

1.3 Project approach

Scrum methodology will be used, because it allows for high flexibility in terms of adapting to the project owner's demands and we believe the constant feedback loop will result in a better product.

1.4 References

- Course manual. Can be found on lms.hr.nl

1.5 Version control

Version	Status	Date	Author	Remarks
0.1	Concept	21-09-2018	Ryan Graute, Tim Dallau	
1.0	Final	24-09-2018	Ryan Graute, Tim Dallau, Daniel Dudink Casper de Keizer
